

Secure Your Inbox with Security Awareness Training and Advanced Threat Detection

Today's organizations know they need a wide variety of technology and training to protect against breaches and threats. And while a robust employee education program is important for training end users, it's only one piece of solving the security puzzle. That's why a comprehensive security solution is needed to protect organizations from today's changing threat landscape – and it all starts at the inbox.

With the combined power of Inspired eLearning's best-in-class security awareness education and anti-phishing simulations, and GreatHorn's cloud email security platform to identify and layer controls across the entire phishing attack kill chain, companies of all sizes can further secure their inboxes and mitigate the risks from today's top threats.

Security Benefits That Come Full Circle:

Cybersecurity Quotient (CyQ™)

A security awareness assessment test, consisting of 10 multiple-choice questions that generate a Knowledge Gap Report. This shows how your organization scored across various security awareness topics such as password management, malware, phishing, and social media security.

PhishProof™

Test your employees' susceptibility to phishing, SMiShing, vishing, and USB baiting. With scheduled campaigns, scheduled randomization, and auto-enrollment for reinforcement, phishing education has never been easier. With PhishHook for Microsoft Outlook, your team can flag suspicious messages right in their inbox.

Translations

Our training programs come with 14 off-the-shelf translations to keep your experience uniform. With the option to add additional translations, you can rest assured your employees can get program content delivered to them no matter where they call home.

SCORM or Hosted

With the flexibility of our award-winning security awareness training programs, you're able to easily deploy security training via our hosted platform or leverage our content to construct your training programs on the LMS of your choice.

Account Takeover Protection

Using biometric authentication that leverages machine learning techniques to capture an employee's unique typing pattern, your organization can verify employee identities and eliminate the risk of Account Takeovers.

Advanced Anomaly Detection

Data-driven analytics to assess relationship strength, spoofing likelihood, technical fingerprints, content analysis and communications patterns to detect and respond to risk.

End User Education

Educate end users at the moment a suspicious emails enter their inbox, with context-specific and customizable layers, so they make safer decision.

Community Threat Intelligence

Receive proactive notification on emerging threat patterns from aggregated actions across billions of emails within the GreatHorn community.

Improved Search and Remediation

Robust search features allow visibility into any combination of factors, to identify all threats quickly and bulk remediate threats from user inboxes in seconds, across the entire organization.

GreatHorn & Inspired eLearning ... Better Together

Mitigate the risk of phishing with layered controls

Using a fact-based detection model that combines artificial intelligence and machine learning, GreatHorn accurately identifies risk areas, threat patterns, and zero-day phishing attacks to allow organizations to respond and mitigate risks in seconds. By layering user risk profiles from Inspired eLearning alongside real-time user engagement metrics, automated policies deliver the most effective controls against email-based threats.

About GreatHorn

*GreatHorn protects organizations from more advanced threats than any other email security platform. By combining highly sophisticated threat detection engine with accessible user context tools and integrated incident response capabilities, GreatHorn Cloud Email Security shields businesses from both sophisticated phishing attacks and fast-moving, zero-day threats, freeing security teams from the tedium of email security management while enabling them to respond to genuine threats faster than ever before. By combining deep relationship analytics with continuously evolving user and organizational profiling, GreatHorn's cloud-native email security platform provides adaptive, anomaly-based threat detection that secures email from malware, ransomware, executive impersonations, credential theft attempts, business services spoofing, and other social engineering-based phishing attacks.
